

Reading Workshop

By Alex

Do you know that if reading was not invented we would not be very smart? Well, reading was invented, and in 2nd grade, we are very smart because we read to find out all kinds of information. Mrs. Gordon's class has reading workshop where we read to be better readers. We also do it to interest people into reading many books. We have reading workshop in the classroom every day. We started reading workshop on the first day of school! We practice reading a lot in school and at home. We read nonfiction books and we read fiction books too. We learn about things like character traits and feelings in reading workshop. Reading workshop is a great way to make people smarter. I hope I have reading workshop every year.

Digging For Fossils

By Jeffrey

Do you want to know about digging for dinosaur fossils? If so, read on to find out more! One day this past March, our class went digging for dinosaur fossils. We found the fossils in Ms. Magilligan's science room. We searched for any fossils in a big box. We did this because we were learning about dinosaurs. Ms. Magilligan thought it would be fun to dig for dinosaur fossils, so she had each of us dig through one box filled with dry sand. We dug through with spoons and found things like rocks, shells, minerals, and some fossils. Wouldn't it be fun if you tried it too?

The Community Helpers Project

By Jason

Do you know how we made our community helper project? Read this article and find out! Our class made pamphlets to help other people learn about jobs in our community. Do you know where we

made them? We made them in the computer lab and we made them in the classroom during the month of March. Do you know why we made them? So we could learn about different jobs people have in our community. Do you know how we made them? We used a computer program called Print Shop, and we had to read, look and learn to find out what we needed to know about our community helpers. I enjoyed this project because it was fun. Our class enjoyed it too!
